

## AS5001 Arcadium™ Low Jitter Fixed Frequency Oscillator, 10 kHz to 350 MHz

The AS5001 Arcadium™ all-silicon oscillator utilizes proprietary frequency synthesis and sensor technologies to provide a quartz-free, MEMS-free, low jitter clock at any output frequency. The device is factory-programmed to a fixed frequency ranging from 10 kHz to 350 MHz with < 0.026 ppb resolution and maintains low jitter across its operating range. It uses on-chip temperature and strain sensors, and an advanced LC tank architecture to achieve excellent reliabilities even in high impact shock scenarios.

AS5001's on-chip power supply filtering provides industry-leading power supply noise rejection, simplifying the task of generating low jitter clocks in noisy systems that use switched-mode power supplies. Offered in a variety of industry-standard packages, the AS5001 has a dramatically simplified supply chain that enables Aeonsemi to ship samples shortly after receipt of order. The AS5001 is factory-configurable for a wide variety of user specifications, including frequency, output format, and OE pin location. Specific configurations are factory programmed at time of shipment, eliminating the long lead times associated with custom oscillators. This process also guarantees 100% electrical testing of every device before shipment.

### KEY FEATURES

- Quartz-free and MEMS-free without mechanical moving parts
- Available with frequencies from 10 kHz to 350 MHz
  - Differential: 10 kHz to 350 MHz
  - LVCMOS: 10 kHz to 212.5 MHz
- Low jitter: 350 fs Typ RMS (12 kHz – 20 MHz bandwidth)
- Compliant to PCIe Gen 1/2/3/4/5 jitter requirements
- 50 ppm stability (-40 to 105°C)
- Integrated LDO for on-chip power supply noise filtering
- Support continuous 1.8V to 3.3V V<sub>DD</sub> supply operation
- LVPECL, LVDS, CML, HCSL, CMOS, and Dual CMOS output options
- Industrial standard 3.2 x 5, 2.5 x 3.2 mm package footprints

### APPLICATIONS

- 1G/10G/40G/100G Ethernet
- Servers, switches, storage, NICs, search acceleration
- Test and measurement
- Clock and data recovery
- FPGA/ASIC clocking

### Pin Assignments

(LVPECL/LVDS/HCSL/CML/Dual CMOS)

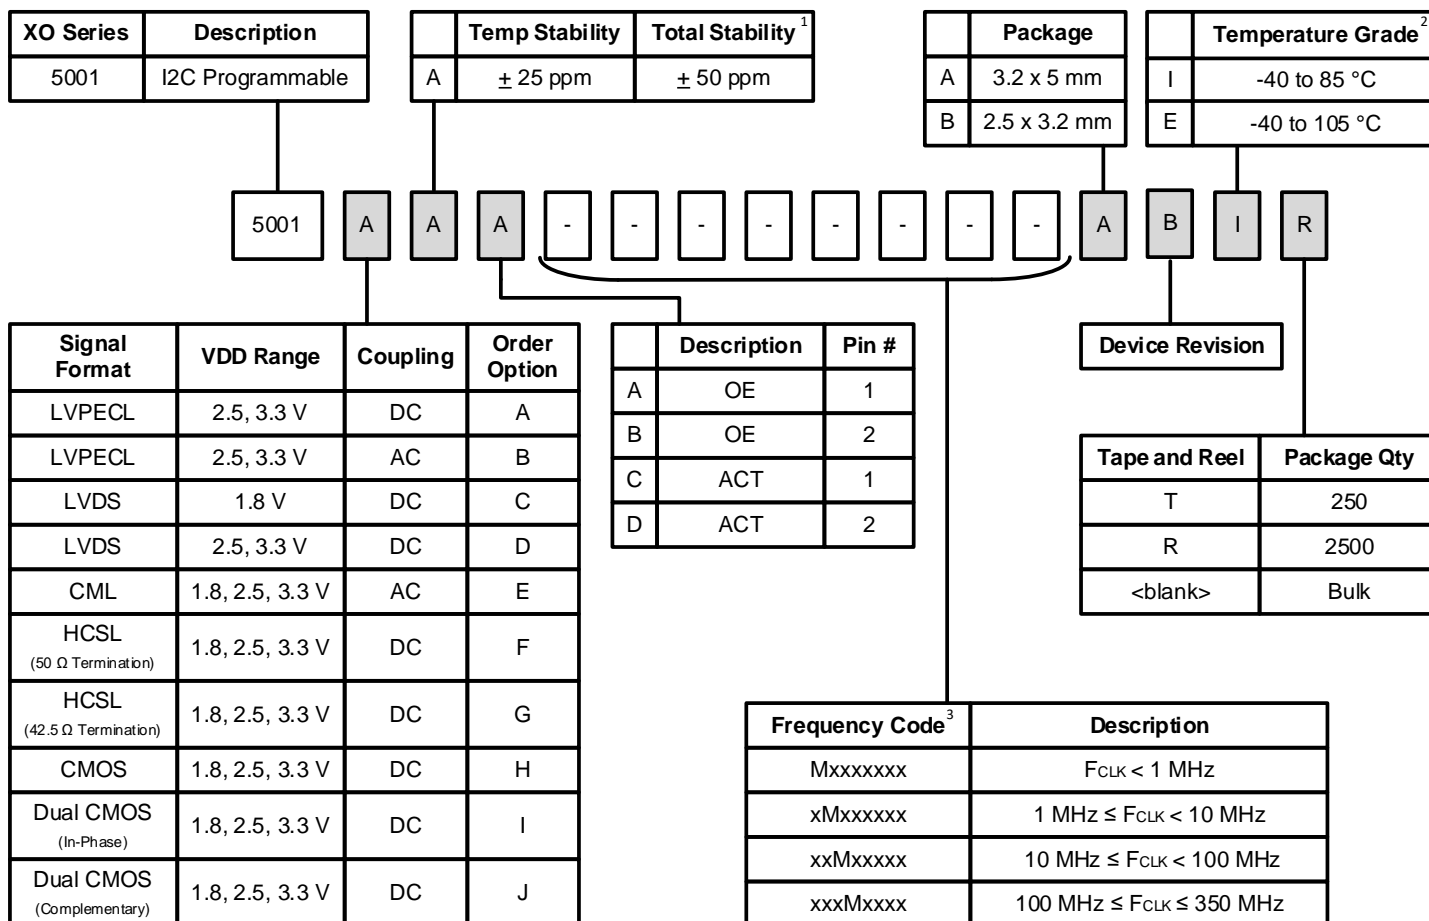

3.2 x 5 mm and 2.5 x 3.2 mm

Pin #	Descriptions
1, 2	Selectable via ordering option OE = Output enable. Active High ACT = Device active. Active High NC = No connect
3	GND = Ground
4	CLK+ = Clock output
5	CLK- = Complementary clock output
6	VDD = Power supply

## 1. Ordering Guide

The AS5001 Oscillator supports a variety of options including frequency, output format, and OE/ACT pin location, as shown in the chart below. Specific device configurations are programmed into the part at time of shipment, and samples are available in 2 weeks.

### Notes:

1. Total stability includes temp stability, initial accuracy, load pulling,  $V_{DD}$  variation, and 10 years aging at 40 °C.
2. Device supports extended industrial temperature range of -40 to 105°C only with  $V_{DD} = 1.8\text{V}$  (+/- 5%).
3. For example: 156.25 MHz = 156M250; 25 MHz = 25M0000.

**Notes:**

- Stresses beyond those listed in this table may cause permanent damage to the device. Functional operation specification compliance is not implied at these conditions. Exposure to maximum rating conditions for extended periods may affect device reliability.
- For  $V_{DD} = 1.8\text{V}$  only; otherwise  $85^{\circ}\text{C}$ .
- The device is compliant with JEDEC J-STD-020.

### 3. CMOS Buffer and Output Terminations

Dual CMOS output format ordering options support either complementary or in-phase signals for two identical frequency outputs. This feature enables replacement of multiple XOs with a single AS5001 device.

**Notes:** The following notes and stencil design are shared as recommendations only. A customer or user may find it necessary to use different parameters and fine-tune their SMT process as required for their application and tooling.

### General

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification.
3. This Land Pattern Design is based on the IPC-7351 guidelines.
4. All dimensions shown are at Maximum Material Condition (MMC). Least Material Condition (LMC) is calculated based on a Fabrication Allowance of 0.05 mm.

### Solder Mask Design

1. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60  $\mu\text{m}$  minimum, all the way around the pad.

### Stencil Design

1. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
2. The stencil thickness should be 0.125 mm (5 mils).
3. The ratio of stencil aperture to land pad size should be 0.8:1 for the pads.

### Card Assembly

1. A No-Clean, Type-3 solder paste is recommended.
2. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

## 7. Top Marking (3.2 x 5 mm and 2.5 x 3.2 mm)

The figure below illustrates the mark specification for the AS5001. The table below lists the line information.

Figure 7.1. AS5001 Top Mark

Table 7.1. AS5001 Top Mark Description

Line	Position	Description
1	1–6	A = AS5001, CCCCC = Custom Mark Code
2	<b>Trace Code</b>	
	1–6	6 digits trace code per assembly release instructions
3	Position 1	Pin 1 orientation mark (dot)
	Position 2–3	Year (last two digits of the year), to be assigned by assembly site (ex: 2017 = 17)
	Position 4–5	Calendar Work Week number (1–53), to be assigned by assembly site
